ACKNOWLEDGMENTS

The 1980 edition of the Maryland Statistical Abstract was prepared by the Division of Research of the Department, PADRAIC P. FRUCHT, Director of Research, NEIL M. SHPRITZ, Chief, Office of Statistical Information Services, ably assisted by IRENE TASHLICK, was responsible for general supervision and compilation. JOHN LIPPMAN, ERIC PIETRAS, and JOHN WELLS provided valuable services in collecting and organizing data. CECELIA CLARK was responsible for clerical operations, and she was assisted by MIRIAM BUTLER, LESLIE JORDAN, PATRICIA PARKS, and TREVA RODGERS.

We thank the many contributors to this volume. Notes below each table credit its sources. Wherever private sector sources are indicated, permission to use such material should be obtained from each source so cited.

January 10, 1981

The Honorable Harry Hughes
Governor of Maryland
State House
Annapolis, Maryland 21404

Dear Governor Hughes:

I am pleased to transmit to you the "1980 Maryland Statistical Abstract" which was prepared and published by the Department as part of its continuing effort to maintain, on as current a basis as feasible, a data base on which sound decisions affecting the welfare of our citizens can be made by government and private enterprise.

This publication provides a statistical record of the composition, changes and trends in population, incomes and employment in business and industry, government receipts and expenditures, agriculture, natural resources, and many other aspects of life in Maryland. Hopefully, State and local government agencies, individuals, and business firms will find the data useful to them. To that end, the user will note that this edition is being distributed now rather than on a biennial schedule as was the case with earlier volumes.

We believe this edition to be the most complete compendium of Staee data yet produced in Maryland. In updating and expanding the coverage of the last Statistical Abstract, we have added pages of newly developed data and an enlarged section on education. Also, preliminary data from the 1980 Census of Population and Housing are included. In the Appendix to this volume, we have reproduced a number of historical time series, by month, of significant economic indicators.

Great care has been taken to insure the usefulness and accuracy of this publication. As with previous editions, this report has benefited from suggestions and comments from interested users. We anticipate a continuation of such support in the future.

Sincerely,

James O Roberson

POPULATION AND VITAL STATISTICS

A preliminary count of the 1980 Census furnished by the U.S. Bureau of the Census indicates that the population of Maryland has grown by 6.7 percent since 1970. Comparable counts for all of the states are not yet available.

As might be expected in an area as diverse as Maryland, there is considerable variance of growth among the political subdivisions of the State. Howard County was the fastest growing subdivision with a 89.8 percent increase in population over the period from April 1, 1970 to April 1, 1980. Next were Calvert (65.9 percent), Charles (51.7 percent), Carroll (39.2 percent), and Queen Anne's (38.5 percent) Counties. At the opposite extreme was Allegany County (-4.3 percent). Concurrently, Baltimore City showed the largest loss in population, with a drop of 13.5 percent indicated.

Consistent with national growth patterns, the population shifts have been urban in nature. The greatest increases are to be found in metropolitan Baltimore, with the exception of Baltimore City, and in extensions of suburban metropolitan Washington, Calvert, Charles and Frederick Counties. As is readily seen, with the exception of Baltimore City itself, and Prince George's County which has experienced a decrease in population, the political subdivisions with below average growth are predominantly rural in their characteristics. Approximately 83 percent of Marylanders reside in the Baltimore and Washington metropolitan areas, with the greater growth coming from Howard, Calvert and Charles Counties.

More detailed demographic aspects resulting from the 1980 Census are not available as of this writing. However, the most recent estimates indicate that Baltimore City contains by far the greatest concentration of non-white citizens in the State. Of the 1,005,690 non-white Marylanders in 1978, 434,660 or 43 percent reside in that jurisdiction. The overall percentage of non-white persons in the State is 24.2, while in Baltimore City, 55 percent of the population is non-white. Of the total population estimate for the State, 36.7 percent are white male, 39.1 percent are white female, while non-white males comprise 11.5 percent and non-white females, 12.7 percent.

Following the national trend, the birth rate of the general population in Maryland increased from 1976 to 1977 (5.5 percent). Most political subdivisions shared in this rise. The State's birth rate in 1977 was 13.5 per thousand population; with the white birth rate standing at 12.2 and the non-white at 18.0. At the same time, the death rate here was 7.8 per thousand, with the white death rate at 8.0 and the non-white at 6.8.

There were 45,170 marriages in Maryland during 1977. Roughly 16,615 divorces and annulments were granted during that year, with 68.6 percent being decreed on the grounds of voluntary separation.

EDUCATION

Education has been standing in the spotlight of publicity throughout the Seventies. Nearly 778,000 people were enrolled in public schools throughout Maryland in 1979. Following the national trend, elementary school enrollment has been declining due to decreases in the population of persons of elementary school age. Despite the decreases in births, nursery school attendance has been climbing. While most formal education takes place in the public school environment, approximately three-fourths of nursery school enrollment is in private schools.

On a statewide basis, the cost per pupil has risen to $2,049 and the number of pupils per teacher and administrator has declined to 16.2.

Public high schools in Maryland graduated over 55,000 students in 1979, roughly 600 fewer graduates than the previous year. The percentage of 1979 graduates (43 percent) continuing into higher education was slightly higher than in 1978.

Over 28,800 full time students were enrolled for the Fall 1979 term in the 22 two-year colleges here. If one includes part time students, the figure exceeds 89,300. The 30 four-year colleges and universities comprised a full time undergraduate enrollment of more than 70,500 students. Added to this figure are 29,500 part time students and roughly 30,000 graduate students, bringing the total to nearly 130,000 students enrolled in institutions of higher education in Maryland.

Federal support to institutions of higher education in Maryland during fiscal year 1978 amounted to over $308.5 million of which $247.4 million (80.2 percent) was directed towards academic science programs.

HEALTH SERVICES

During the 1980 Fiscal Year, Maryland's hospitals for the mentally ill treated nearly 14,000 patients, a decrease of 9 percent from the number of patients treated during 1979. This decrease continues a trend observed for several years which may be due to shortened periods of hospitalization of new admissions and the gradual continuing decrease in the number of long term patients. The average daily size of the patient population declined 5 percent during this period, from 3,724 in 1979 to 3,537 in 1980.

It is generally believed that the rate of occurrence of most mental illnesses has not changed appreciably and that these figures reflect the growing acceptance and usage of psychiatric hospitals and clinics for the short term intensive treatment of alcoholism and acute psychoneurotic and personality disturbances.

In general health care, there were more than 22,100 hospital beds in the State as of May 1980, and there were roughly 27,300 beds in other types of health care facilities here. And, according to the most recent data available (1977-78), there were, on a Statewide average, 1,441 Marylanders per physician providing primary patient care. As one might expect, there is considerable variation among the political subdivisions of the State.

CLIMATE OF MARYLAND

Maryland lies in the region midway between the rigorous climates of the North and the mild climates of the South. Since it is located in the middle latitudes where the general atmospheric flow is from West to East across North America, it has a continental type of climate with its marked temperature contrast between summer and winter; however, two important bodies of water, the Chesapeake Bay and the Atlantic Ocean have an important modifying control on the climate, especially by moderating extreme temperatures of adjacent areas.

The average annual temperature ranges from 48° F. in the Garrett County area to 59° F. in the lower Chesapeake area. The highest temperature on record is 109° F. recorded at several places in Allegany and Frederick Counties, while the lowest is -40° F. at Oakland, Garrett County. Based on the 1941-1970 period, the average annual precipitation ranges from as much as 47 inches at opposite ends of the State, Allegany Plateau and Southern Eastern Shore, to as little as 36 inches in the Cumberland area located in the "rain shadow" just to the east of the Allegany Plateau. Elsewhere over the State, the annual precipitation ranges monthly between 40 to 44 inches. Monthly distribution is quite uniform, averaging between 2 and 4 inches each month and reaching a maximum between 4 and 6 inches in July or August. Annual snowfall ranges from a minimum of 8 to 10 inches along the coastal areas of Southern Eastern Shore to a maximum of near 100 inches in parts of Garrett County.

Prevailing winds are mostly from the west-northwest to northwest except during the months of May through September, when they become more southerly. Damaging or dangerous storms, such as tornadoes, hurricanes and blizzards, are infrequent.

The climate of Maryland is a dependable natural resource which provides an excellent setting for the agricultural, industrial, commercial and recreational activities of its citizens.

Included within this section is a rather detailed table showing cloud cover conditions in Maryland. It is indeed interesting to note the variations in the amount of cloud cover from region to region. These conditions determine the feasibility of many horticultural projects.

NATURAL RESOURCES

Maryland's 2,653,000 acres of forest land represent nearly 42 percent of the total land area of the State. As one might expect, however, there is considerable variance among the political subdivisions. The vast majority of commercial forest land, 95 percent, is held in private lands, while public ownership accounts for the remainder.

Almost 79 percent of the timber in Maryland is of the hardwood varieties, and an estimated 213.1 million board feet of lumber were cut during 1978. Forest fires are always a threat, and in 1979, 347 such blazes burned a total area of 3,731 acres. All counties suffered from these fires, and the causes were primarily carelessness in nature.

$217 million worth of minerals were extracted during 1978. The leading commodities were bituminous coal and stone, accounting for 27 percent and 26 percent, respectively, of the total. Sand and gravel were next as these items accounted for another 14 percent of the value extracted.

Maryland touches both the Atlantic Ocean and the Chesapeake Bay. Seafood, therefore, becomes a vital resource. As impressive as the data reported herein appears to be, the user must be cautioned that there is a substantial under-count, what with the large number of sport fishermen active in our waters.

Data indicate a Maryland catch in 1979 with a dockside value of nearly 35.2 million. The major share of this catch is credited to shellfish which account for more than $32.2 million of the total. Oysters were the leader ($15.2 million), followed by clams ($9.6 million) and crabs ($6.5 million). Leading finfish catches by value were striped bass (rockfish), bluefin tuna and flounder.

LABOR FORCE, EMPLOYMENT AND UNEMPLOYMENT

More than 1.9 million Maryland residents were employed in 1979 as both the civilian labor force and the working members of that labor force continued to grow. On an average basis, the unemployment rate of 5.8 percent in Maryland for 1979 was up from 5.6 percent in 1978.

Annual average non-agricultural employment figures in Maryland for 1979 indicate gains over 1978 in all sectors with the exception of federal government as well as state and local government employment, which decreased slightly. The larger gains were reported in the non-manufacturing sectors, services and mining (4.4 percent), finance, insurance and real estate (4.2 percent), and transportation and utilities (3.1 percent).

The role of federal government civilian employment in Maryland should not be overlooked. More than 129,000 people were employed by various federal agencies in Maryland at the end of 1979.

An additional 45,200 civilian and military employees work for the Department of Defense.

Included in this section are tables showing commutation patterns of workers. Both interstate and intrastate destinations are shown. It is interesting to note that nearly 40 percent of our labor force works outside its subdivision of residence.

Labor relations have continued good in Maryland. In conformity with historical trends, the percent of estimated work time lost by stoppages in Maryland was again lower than corresponding national figures.

MANUFACTURING EMPLOYMENT AND PAYROLLS

While the primary cause of economic growth has been in the non-manufacturing sector, certainly manufacturing represents a major factor in Maryland's economy, with 15.2 percent of the nonagricultural wage and salary employment. Annual average employment in manufacturing was 245,700 employees in 1979, or approximately 12.5 percent of the total employment in Maryland.

Manufacturing employment has been rising since 1975, and payrolls have increased significantly (33 percent) over this period. The largest manufacturing payrolls in Maryland during 1978 were in the primary metals, electrical equipment, food products and transportation equipment industries.

Average weekly earnings for all manufacturing in the State rose from $241.40 in 1977 to $283.60 in 1979 while average hourly earnings rose from $6.05 to $7.09 during the same period.

Value added(1) figures for 1977 were led by food and kindred products, electric and electronic equipment, primary metals, machinery excluding electrical, and chemicals and allied products. While ranking somewhat below certain other mid-eastern states in value added, Maryland experienced a percentage growth of 51 percent over the 1972 to 1977 time period.

Historically, Baltimore City has been the dominant location for manufacturing firms in Maryland. In 1979 that political subdivision had virtually 33 percent of the firms in the State. Next in order, in terms of number of firms, but far behind, are Baltimore (301), Montgomery (205), Prince George's (199), and Anne Arundel (107) Counties.

---

(1) The difference between the value of goods and the cost of materials or supplies that are used in producing them. Value Added is derived by subtracting the cost of raw materials, parts, supplies, fuel, goods purchased for resale, electric energy, and contract work from the value of shipments.

(1) 1977, 1972, 1967 and 1963 are census years and are recorded in the Census of Manufactures.

All other years represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures and may therefore differ from results that would have been obtained from a complete canvas of all manufacturing establishments.

(2) Includes:

- Maryland
- Delaware
- West Virginia
- District of Columbia
- Virginia
- North Carolina
- South Carolina
- Georgia
- Florida

(3) The definition of this SMSA was revised for 1972. Historical data prior to 1972 are based on the old definition. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition.

TRADE

Trade activity encompasses retail trade, wholesale trade, and selected services. Figures developed by the United States Bureau of the Census in its business censuses are quite interesting.

More than 28,300 retail establishments were situated in Maryland in 1977 and their aggregate sales were approximately $14.4 billion. These figures represent a 6.1 percent increase in the number of establishments and a 52.7 percent increase in dollar volume from the data reported five years earlier. Eating and drinking places, food stores, and gasoline service stations were the more frequently reported types of establishments of those categorized, while food stores, automotive dealers, and general merchandise group stores reported for higher dollar volumes.

The number of wholesale trade establishments grew by nearly 6 percent over the same period, and a 65.5 percent dollar volume increase was shown. Establishments dealing in machinery, motor vehicles and automotive equipment, and groceries were the more frequently reported, and dollar volume rankings showed motor vehicle and automotive equipment, machinery, and grocery establishments leading the list.

* In the 1977 Census of Retail Trade, an adjustment has been made at the State level in the 1972 "All Establishments" data to reflect the exclusion of nonemployer direct sellers ("direct selling establishments" are shown in "nonstore retailers" category). For the State, this change provides the following reductions from the originally published 1972 figures: Number of establishments - less 4,621; Sales - less $62,000,000.

** Adjusted figure to allow for comparability of receipts of advertising agencies. 1977 Total Receipts reflect commissions, fees and other income of advertising agencies rather than gross billings as in previous censuses.

* In the 1977 Census of Retail Trade, an adjustment has been made at the State level in the 1972 "All Establishments" data to reflect the exclusion of nonemployer direct sellers ("direct selling establishments" are shown in "nonstore retailers" category). For the State, this change provides the following reductions from the originally published 1972 figures: Number of establishments - less 4,621; Sales - less $62,000,000. A similar adjustment at the county level, however, is not available. Therefore, the county data, as shown, will total to the State figures published in the 1972 Census of Retail Trade.

(1) For week including March 12.

PERSONAL INCOME

Maryland's personal income rose in 1979 to $38,706,000,000 an increase of nearly 23 percent from 1977. The total personal income of the State represents 2.0 percent of the total personal income of the United States, slightly lower than the 2.1 percent in 1977.

Per capita income in Maryland rose to $9,331 in 1979, up 22.6 percent from 1977. This figure placed the State eleventh in the nation in this category.

In average per household consumer spendable income in 1979, Maryland ranked second among the mideast states with a level of $22,364. As might be expected, the metropolitan areas were the leaders, with suburban Washington's Montgomery County having the second highest average disposable income ($29,442) of any County in the United States. Baltimore and Prince George's Counties each have disposable income figures in excess of $25,000 per household, while at the other end of the scale, Allegany, Garrett, Caroline and Calvert Counties all have levels of less than 15,000.

The Gross State Product for Maryland in 1979 is estimated to have risen in current dollars to 42.5 billion, an increase of 10 percent above the level of 1978. The Gross State Product concept is roughtly equivalent to the national level Gross National Product, i.e., the State output of goods and services valued at market price.

Note on the Poverty Level:

The poverty level is a designation used by the federal government as one means of identifying areas and persons with income levels so low that some economic hardship is likely to be present. Various levels have been determined depending on family size, sex of family head, number of children and type of residence. The poverty level threshold averages about $3,750 on a national basis. The data for families below the poverty level have several limitations--for instance the poverty levels are not adjusted for state or local variation in costs of living, but are satisfactory for giving a general picture of the existence and location of low income.

Total transfer payments and personal income, Survey of Current Business, August 1979.

CITY WORKER'S FAMILY BUDGET

The city worker's family budget refers to the annual cost of a moderate living standard for a family comprised of a 38-year-old husband, a wife not employed full time outside the home, a 13-year-old boy, and an 8-year-old girl. This is the model family devised by the Bureau of Labor Statistics, U.S. Department of Labor.

In 1979 the average urban worker's budget was $20,517 while the Baltimore budget was $20,316. The Washington budget at the same time was $22,206. Using 39 metropolitan areas to equal 100, the Baltimore area had an index of 99 while the Washington area index was 108. As will be noted in accompanying tables, average earnings differ considerably as between occupational groups when using the metropolitan areas base.

The Consumer Price Index increased from September 1979 to September 1980 by 13.4 percent in the Baltimore Area, by 11.8 percent in the Washington D.C. Area, and by 12.7 percent for the United States city average.

STATE FINANCE

Maryland's fiscal 1979 State expenditures totaled $4,006,429,000. Of this total, 18.5 percent went to education, 16.9 percent to transportation, and 16.4 percent to public health, hospitals and mental hygiene, with 9.4 percent going to public assistance programs.

During the same fiscal year, the State received a total of $3,883,262,000 in revenues, 28.5 percent of that total coming from income tax sources, 18.0 percent from retail sales and use taxes, 11.1 percent from motor vehicle user taxes and fees, 22.7 percent from federal funds, 14.1 percent from sundry taxes, licenses, fees and charge for services, 2.0 percent for interest and other investment income, and a dollar figure of $120,000,000 from bond proceeds.

Net cash expenditures increased 12.9 percent from fiscal year 1978 to fiscal year 1979. Net cash revenues increased 10 percent during the same fiscal period.

FINANCIAL INSTITUTIONS

The number of active banks of all types in Maryland decreased from 116 to a total of 109 between 1976 and 1978. Total assets increased during the period by 22.9 percent. State banks and trust companies numbered the same as in 1976, but total assets increased by 34.7 percent. While the number of national banks fell by 17.1 percent, their total assets rose by 11.7 percent. Meanwhile, credit unions decreased in number from 32 in 1976 to 31 in 1978. Total assets of the credit unions in 1978 stood at 207.6 million, an increase of 39.3 percent since 1976, however, possibly indicating an increase in the size of such institutions.

The number of building, savings and loan associations in Maryland decreased from 204 at the end of 1978 to 200 one year later. Of those associations active at the end of 1979, 53 were Federally chartered, 147 State chartered, and 132 were State chartered with Maryland Savings Share Insurance Corporation insurance.

Nearly $8,633,000,000 in mortgage loans were outstanding as of December 31, 1979 by the associations in Maryland, a 4.4 percent increase from 1978. Similarly, total assets increased to $9,896,348,527, representing a 4.2 percent increase.

LIFE INSURANCE

The strength of the Maryland economy is again evident in the field of life insurance. Nearly $5,394,000,000 of ordinary life insurance was purchased in Maryland during 1978. This figure represents an 13 percent increase from the prior year and a 92.3 percent increase since 1971.

When all types of life insurance are considered, Marylanders held 8,353,000 policies with an in force valuation of almost 56.4 billion dollars. The average amount in force per family in Maryland stood at 36,900 during 1978, representing an inceease of 37.7 percent since 1974. Maryland's average is therefore somewhat above the national family average of 35,100 of life insurance in force.

NO. 138

LIFE INSURANCE IN FORCE IN MARYLAND: 1978

TYPE	NUMBER OF POLICIES (1,000)	AMOUNT ($1,000,000)
Total	8,353	56,403
Ordinary	2,852	28,322
Group	1,900	24,086
Industrial	1,751	1,011
Credit	1,850	2,984

Average amount in force per family $36,900 (37.7 percent increase since 1974).

Note: "Credit" is limited to life insurence on loans of ten years' or less duration. "Ordinary" and "Group" include credit life insurance on loans of more than ten year's duration.

*Includes group credit certificates.

MASS MEDIA

There are two major market centers for the mass media in the State, as well as several smaller ones. The major market centers are metropolitan Baltimore and metropolitan Washington, D.C.

Fourteen daily papers, as well as two designated as Washington, D.C. publications serve the State, and five more publish twice weekly. In addition, there are a myriad of weekly newspapers put out at least once a week throughout the State.

There are ten television stations on the air in Maryland. In addition, there are six stations on the air from Washington, D.C., which serve many viewers in Maryland.

Four of the stations in Maryland are noncommercial, as is one operating from Washington. However, the noncommercial channels in Maryland, with the call letters, WAPB, WMPB, WCPB and WWPB, are State-operated stations, with the Maryland Public Broadcasting Commission being the licensee. Eventually, the Commission will operate seven channels throughout the State. In addition to the facilities existing presently near Annapolis, Baltimore, Hagerstown and Salisbury, transmitters are planned for Cumberland, Frederick and Waldorf.

Beside its potential range, the commercial television channel on the Eastern Shore has its range augmented by use of cable subscription, and the commercial channel operating from Hagerstown has its range expanded to reach the surrounding Pennsylvania and West Virginia areas as well as the Maryland viewers due to the many homes subscribing to cable services in that market.

Maryland radio listeners have their choice of 50 AM stations as well as several Washington, D.C. outlets which reach the State's residents. In addition to these stations, there are 53 FM stations located in Maryland, and again there are additional facilities originating from the District of Columbia. These FM stations cover the broad range from simultaneous programming with AM affiliates to partial simulcasting to independent operations.

The communications facilities are thus well represented in the State, and Maryland's citizens have broad latitude and availability among the printed and electronic media.

COURTS AND LAW ENFORCEMENT

This section deals with the juvenile facilities, adult correctional facilities, State trial Courts (civial and criminal), and the Federal trial Court in Maryland (civil and criminal).

The juvenile facilities in Maryland are under the jurisdiction of the Juvenile Services Administration, a constituent agency of the Department of Health and Mental Hygiene. In the twelve month period from July 1, 1978, through June 30, 1979, there were 44,109 juvenile Court cases reported, with the largest number coming from Baltimore City (14,495), followed by the metropolitan Counties of Prince George's (6,850), Baltimore (5,472), Anne Arundel (4,513), and Montgomery (2,810). The average daily population in fiscal 1979 of the six juvenile institutions in the State was 871.

Adult correctional institutions in the State housed an average daily population of 8,073 inmates in fiscal 1979. The average annual per capita cost per inmate was $6,556. These statistics, of course, deal with the statewide correctional institutions, and local facilities are not included.

As of June 30, 1979, there were 90 Circuit Court (trial) judges in the State which is divided into eight judicial districts for administrative purposes. Each County has a minimum of one jurist, and Baltimore City has 22 trial judges. On the basis of population per judge, the range is from 16,500 per judge in Kent County to 69,800 per judge in Charles County. Though these extreme ranges are severe, a more moderate range will be noted generally by the reader of the table. On a statewide average, the population per judge is 46,606 with 1,162 civil cases and 428 criminal cases representing the trial load. During the year from July 1, 1978 through July 30, 1979, 81,064 civil cases were filed in Maryland trial Courts, an increase of

8.5 percent over fiscal year 1978, and 69,692 civil cases were disposed of in the same period, an 11.2 percent increase in dispositions.

There was a 7.8 percent increase in the filing of criminal cases, and an 11.2 percent increase in dispositions in this area. As a consequence, therefore, when all cases (civil and criminal) filed in the trial Courts of Maryland are considered for this period, there were 119,580 cases filed, an increase of 8.3 percent, while there were 105,968 dispositions, representing an 11.3 percent increase.

The United States District Court for the District of Maryland (coincident with the State boundaries) sits in Baltimore City. Relatively speaking, its backlog remains in good condition. As of June 30, 1979, there were 2,432 civil cases and 335 criminal cases pending. In absolute terms, 2,447 civil cases and 964 criminal cases were terminated during the fiscal year.

The bankruptcy backlog did increase substantially over the same time frame, with 2,151 cases being commenced and 1,855 terminated.

There were 3,439 aliens who were naturalized in the Court during the 1979 fiscal year.

* These figures differ somewhat from those printed in past reports:

(1) Fiscal 1977 and Fiscal 1978 figures were computed excluding the shortest and lengthiest 5 percent of the cases.

(2) All figures in the 1978-79 Statistical Abstract were computed by using a simple arithmetic mean, or average, but computations had the benefit of two factors not available previously:
(a) a more complete data base was used
(b) present computer system captures case ages of more then 999 days while previously unusual lengthy cases were not included.

SOCIAL SERVICES

Programs of the various local departments of social services are subject to the supervision, direction and control of the Maryland Social Services Administration, a major agency within the Department of Human Resources.

Generally speaking, the locally administered programs are public assistance, financial eligibility for medical assistance, child welfare services, and other services related to social planning. Funds for the various programs come from Federal, State and local sources, with percentage portions varying by the type of program.

In fiscal 1979, over 443,900,000 was paid out to individuals and families, an increase of 2.2 percent over the preceding year. About 38 percent of these payments were in the form of aid to families with dependent children. The total value of food stamp coupons sold in fiscal 1979 was $119,656,896, a decrease of 6.5 percent from the preceding year.

ENERGY

As the days of cheap and apparently plentiful energy came to a rather abrupt end recently, public awareness of the problems rose dramatically.

Demand for natural gas energy grew by over 7.5 percent from 1970 to 1979 in terms of the number of customers. However, revenues rose by more than 196 percent over the same period. But, in recent years the demand is really not shown in the traditional way as various moratoria imposed by the utility companies have forbidden or restricted new gas hookups at times.

Total commercial and industrial electric sales rose by more than 67 percent from 1969 to 1979. Sales in 1979 increased by nearly 5 percent over the preceding year, and were 8 percent higher than 1977 sales. Virtually all of the installed generating capacity in Maryland is privately owned.

Much of the public interest has been devoted to the motor vehicle gasoline situation. According to a current survey by the U.S. Bureau of Labor Statistics, average prices for gasoline sold in the Baltimore Metropolitan Area increased from June 1978 to September 1980 as follows: regular grade--60.4 cents to $1.215 cents; unleaded grade--66.0 cents to $1.265 cents; and premium grade—68.6 cents to $1.302 cents. Prices in this area were higher than national averages.

The telephone continues to play an increasingly dominant role in communication. There are more than 1,830,000 accounts with almost 3.5 million telephones in the State. Continued expansion is promised with the growing usage of the telephone for data processing and consumer services.

THE PORT OF BALTIMORE

The Port of Baltimore ranks as the sixth largest foreign trade port in the United States. In 1979, 38,529,000 short tons of cargo valuing over $12.8 billion were handled. Exports show an increase over 1978 of 26.9 percent in tonnage and 15.6 percent in value; imports increased by 6.0 percent in tonnage and 8.5 percent in value.

Although the export tonnage represents only 47 percent of the total tonnage, its value is nearly 58 percent of the total value. This fact is due to the more sophisticated nature of the manufactured devices primarily in export as opposed to the bulk commodities and raw materials being imported.

In terms of import tonnage, the principal countries of lading on foreign commerce are Canada, Algeria, Venezuela and Brazil, but in value, Japan, West Germany, the United Kingdom and France lead, in that order. Broken into trade areas, Europe has a lead in value and tonnage of exports, and is our principal trader.

The use of containerization has grown markedly and continues to contribute substantially to Baltimore's tonnage figures which increased from 4.1 million tons in 1978 to 4.4 million tons in 1979 (7.2 percent). At Dundalk Marine Terminal, the largest facility in the Port, container cargo increased .7 percent in 1979 to nearly 3 million tons. Container tonnage at North Locust Point Marine Terminal increased 1.9 percent and at South Locust Point Marine Terminal container cargo movements were up by over 1,000 percent.

AIR TRAVEL

Baltimore-Washington International Airport serves as the major commercial air facility in the State. This operation is owned by the State of Maryland, and it is operated by the Maryland Department of Transportation.

During 1979, over 3.7 million passengers were handled on more than 220,200 air traffic operations. Freight traffic totalled more than 134.8 million pounds, and a significant volume of mail was unloaded at the facility. Total freight operations were down by over 9 percent from 1978 to 1979, while total mail operations decreased by 12 percent.

The construction of a train station along the Amtrak mainline just one and one-half miles from BWI has been completed, with the station now being used for boarding and disembarking passengers to and from Baltimore, Washington and other points in the corridor.

In addition to BWI, a listing of airports and heliports in Maryland shows 39 other facilities, spread out among 22 of the State's 24 political subdivisions. Scheduled operations serve several of these locations.

MOTOR VEHICLES

Motor vehicles play a major role in the Maryland economy. In addition to traffic volume and highway utilization rates, the manufacture, distribution, maintenance and commercial use of motor vehicles in the State represent a major economic force. Employment in the motor vehicle industry and related industries accounts for 17.0 percent of total employment in the State.

There were 2,930,666 motor vehicles registered in our State during the 1980 registration year. Some 2,707,000 persons held licenses to operate vehicles as of January, 1980.

There are 26,018 miles of highway in the State, half of which is in the metropolitan Baltimore and the metropolitan Washington areas. Interstate highways comprise more than 367 miles of these totals. Traffic recorders located at 41 points in the State for 1979 indicate a decrease generally in travel on toll facilities with the exception of the newest facility, the Francis Scott Key Memorial Bridge on Maryland 695. The total of all toll facilities showed a decrease of nearly 2 percent from 1978 to 1979; traffic on J.F. Kennedy Highway (I-95) was down by 3 percent and Chesapeake Bay Bridge traffic decreased 1.7 percent. Volume on the F. S. Key Memorial Bridge increased from 6 million vehicles to more than 7.4 million (23 percent).

Motor vehicles user taxes, licenses, fines and costs amounted to over $431,000,000 in fiscal 1979, up by nearly $59,000,000 from the fiscal 1977 figure. The 1979 amount represents 11 percent of the total State revenues for the fiscal year.

AGRICULTURE

Maryland, like most other states of the United States, and especially the "megalopolitan" states, has been undergoing a shift from rural agricultural living and employment to urban manufacturing and service employment.

Accordingly, the land devoted to farming and the number of farms has been steadily declining. In the period from 1970 to 1980, the land in farms has declined from 3,080,000 acres to 2,780,000 acres, while the number of farms in the State has declined from 18,800 to 16,400. A natural corollary here has been the decline in farm workers to an annual average of 34,000 in 1974, including family and hired workers. This trend has continued in recent years. The 1979 number of farm workers declined to an annual average of 33,000.

The largest sources of farm income are livestock and livestock products, which in 1978 accounted for 65.8 percent of all agricultural receipts in Maryland. The dominance of this category is due primarily to dairy products and poultry. Cattle and calves, eggs and hogs are important, but they represent substantially smaller elements. In the same year, field crops accounted for approximately 25 percent of the receipts for all commodities led by corn, soy beans and tobacco. At the same time, vegetables and melons as well as greenhouse and nursery products were important sources of farm income in the State.

Prices received by farmers have improved quite substantially in the period from 1971 to 1979. Using a base period of 1967 to equal 100, the index number for all commodities rose from 106.0 in 1971 to 210.0 in 1979. Likewise, the all crops index rose over the same time period from 118.0 to 216.0, while an index based on livestock and livestock products went from 100.0 to 207.0.

HOUSING AND CONSTRUCTION

Traditionally, home ownership has been a goal for most Marylanders. Virtually 59 percent of the housing units in the State were owner occupied at the time of taking the most recent Census of Housing. The variations in percentages of owner occupancy ranged from 71.8 percent in Howard County to 42.2 percent in Baltimore City.

Overall, the quality of housing is rather good when one looks at the generally cited characteristics. Again, there is considerable variance among the political subdivisions.

The total construction contract values ratio of Maryland to the Nation stood at 1.5 in 1979. Speaking in absolute dollars, about $2.5 billion of construction contract awards were made in the State during that year, a decrease of 9.5 percent over 1978. More than $1,180.6 million of the value was for residential construction contracts, while almost $805 million represented awards for non-residential buildings.

There were 26,696 new building permits issued in Maryland for residential dwelling units of all types, a decrease of 12.3 percent over 1978.

Although Maryland is not a major mobile home market, there was a small but steady demand for this type of housing until 1979. After an average of 2,000 shipments between 1970 and 1978, the number decreased drastically to 112 in 1979, undoubtedly a result of sharp increases in fuel prices.

REAL ESTATE

The total assessed value of real property in Maryland in 1980 stood at $32,069,843,000, representing an increase of 5.7 percent over the corresponding aggregate assessment in 1979. The greatest valuation occurs in Montgomery, Baltimore and Prince George's Counties, and in Baltimore City, in that descending rank.

Strides have been made among the local jurisdictions to achieve uniformity in assessment level ratios, and all assessors in the State are employees of the Maryland Department of Assessments and Taxation. The Statewide average in 1980 was 41 percent.

The federal government owns and leases substantial acreage and buildings in the State. The size of the federal operation is due, at least in part, to the proximity of Maryland to the District of Columbia.

As of September 30, 1978, the federal government owned more than 369,730 acreas of land and 11,691 buildings on Maryland land. And, as of September 30, 1978, just over 3,530 acres and more than 1,100 buildings were leased to the federal establishment.

FEDERAL OUTLAYS IN MARYLAND

While Maryland ranks forty-second among the states in area, and eighteenth in population, it ranked fourteenth in total federal funds received during Fiscal Year 1979.

Of the $11.6 billion in 1979 outlays in Maryland more than $3.0 billion were in Montgomery County, $2.9 billion in Baltimore City, while Prince George's County received over $1.5 billion and Anne Arundel County, a little over one billion.

From the myriad of federal programs, defense outlays were almost $3.4 billion, outlays in the retirement and disability program were nearly $1.8 billion, and it is thus seen that these many federal programs constitute a major impact on the Maryland economy.

ELECTIONS

The 1980 Presidential election returns in Maryland showed a plurality popular vote for the unsuccessful candidate, Jimmy Carter (D), 47.1 percent. Ronald Reagan (R), the winner nationally, received 44.2 percent of the popular vote, while John B. Anderson (Ind.) polled 7.8 percent. Since 1932, this was the third instance in which Maryland voted against the winning presidential nominee.

There were over 1,884,135 registered voters in Maryland for the 1980 general election. Of these registrants, 70.0 percent were listed as Democrats, 23.4 percent as Republicans, and 6.6 percent either declined to give a party preference or were registered with other than the Democratic or Republican Parties.

Harry Hughes was elected Governor of Maryland in 1978 as he polled 71.0 percent of the popular vote, carrying 22 of the 24 political subdivisions of the State. The rather independent pattern of voting in Maryland asserted itself in 1980 as Senator Charles McC. Mathias, Jr., a Republican, was reelected to the United States Senate, carrying a popular vote of 66.2 percent and all of the 24 political subdivisions. Democrat Paul Sarbanes polled 56.6 percent of the popular vote to unseat Republican incumbent Senator J. Glenn Beall, Jr. in the 1976 election for United States Senate.

Comptroller Louis L. Goldstein was reelected and Stephen H. Sachs was elected Attorney General as part of the Democratic Party ticket in 1978. The 1981 Session of the Maryland General Assembly will be composed of 165 Democrats and 23 Republicans.

The Congressional delegation of Maryland is composed of one Republican and one Democratic Senator, while seven Democrats and one Republican serve in the House of Representatives.

RECREATION AREAS

The use of recreational land in Maryland is rather substantial. More than five percent of the land area of the State is classifed as recreation or open space land. As might be expected, there is considerable variation among the political subdivisions, with Garrett (18.6 percent) and Allegany (16.1 percent) Counties having the greater figures.

It was estimated, using data from the 1970 Census of Population and Housing, that 1.8 percent of the State's housing stock is comprised of recreation homes. Worcester County has the highest proportion in the State, followed by Calvert and Garrett Counties. Once again the variety of our natural resources is highlighted by this geographical dispersion of recreational activities from the ocean to the mountains.

NO. 222

RECREATION HOMES, BY POLITICAL SUBDIVISION: 1970

POLITICAL SUBDIVISION	PER CENT OF RECREATION HOMES (ESTIMATED)
MARYLAND	1.81
Allegany	1.00
Anne Arundel	4.23
Baltimore	0.70
Baltimore City	0.51
Calvert	17.49
Caroline	2.02
Carroll	0.36
Cecil	8.96
Charles	3.08
Dorchester	3.62
Frederick	1.66
Garrett	14.76
Harford	0.46
Howard	0.80
Kent	7.57
Montgomery	0.33
Prince George's	0.21
Queen Anne's	6.87
St. Mary's	5.88
Somerset	4.76
Talbot	3.88
Washington	1.52
Wicomico	1.33
Worcester	36.45

Note: The number of recreation homes is estimated as the sum of the enumerated seasonally vacant and migratory housing units and 30 per cent of year-round "other vacant" housing units. Thirty per cent is the percentage for the state that year-round housing units held for occasional use are as a proportion of all year-round other vacant housing units. The other portion of this total of vacant year-round housing consists of housing open for rental occupancy or for sale.

NOTES TO STATISTICAL APPENDIX

This Appendix to the 1980 Maryland Statistical Abstract is divided into three parts. First is a series of tables which we anticipate to be of great utility to many users. Historical time series of many important economic indicators are shown by month, both unadjusted, and, then adjusted for seasonal variations. Many requests for such data are received, and it is hoped that this ready reference will format the material so that maximum benefit may be derived.

Next is a series on prime contracts awarded by the Department of Defense. Again, this is a series which has been added because of increased interest in the topic by the citizenry of our State. The reader is cautioned that the data here reflect prime contracts only and not subcontracts as well.

The final set of tables depicts federal outlays in Maryland coupled with demographic characteristics of Marylanders.

BEST AVAIL

FOOTNOTES:

a/ NOTES ON COVERAGE: It is emphasized that data on prime contracts by State do not provide any direct indication as to the State in which the actual production work is done. For the majority of contracts with manufacturers, the data reflect the location of the plant where the product will be finally processed and assembled. If processing or assembly is to be performed in more than one plant of a prime contractor, the location shown is the plant where the largest dollar amount of work will take place. Construction contracts are shown for the State where the construction is to be performed. For purchases from wholesale or other distribution firms, the location is the address of the contractor's place of business. For service contracts, the location is generally the place where the service is performed, but for transportation and communications services the home office address is frequently used.

More important is the fact that the reports refer to prime contracts only, and cannot in any way reflect the distribution of the very substantial amount of material and component fabrication and other subcontract work that may be done outside the State where final assembly or delivery takes place.

The report includes definitive contracts and funded portions of letter contracts and letters of intent, job orders, task orders, and purchase orders on industrial firms, and also includes interdepartmental purchases made from or through other governmental agencies such as those made through the General Services Administration. The State data include upward or downward revisions and adjustments over $10,000, such as cancellations, price changes, supplemental agreements, amendments, etc.

The estimated amounts of indefinite delivery, open-end, or call-type contracts for petroleum are included in the report. Except for petroleum contracts, the report does not include indefinite delivery, open-end, or call-type contracts as such, but does include specific purchases or delivery orders over $10,000 which are placed against these contracts. Also excluded from the report are project orders, that is production orders issued to government-owned-and-operated facilities such as Navy shipyards. However, the report includes the contracts placed with industry by the government-operated facility to complete the production order.

b/ Includes all contracts awarded for work performed in the United States. The United States includes the 50 States, the District of Columbia, U.S. possessions, the Canal Zone, the Commonwealth of Puerto Rico, the Trust Territories of the Pacific, and other areas subject to the complete sovereignty of the U.S.

c/ Includes contracts of $10,000 and less, all contracts awarded for work performance in the U.S. possessions, the Commonwealth of Puerto Rico, the Trust Territories of the Pacific, and other areas subject to the complete sovereignty of the U.S., contracts which are in a classified location, that portion of intragovernmental contracts and directed procurements for foreign governments under the Foreign Military Sales Act entered into overseas, and contracts for the Civilian Health and Medical Program of the Uniformed Services (CHAMPUS).

d/ Net value of contracts over $10,000 for work in each State and the District of Columbia.

e/ Civil Functions of the Army Corps of Engineers for flood control and rivers and harbors work. Civil Functions data are shown separately and are not included in military functions tabulations.

NOTE: Percentages may not add due to rounding.
